Sirs;

BELOIT, WISCONSIN 53511

5/3/66

These are the photographs you  
requested of the UFO reported appearance  
week before Easter by John Tedderman.

The curve shape of the image is probably  
due to camera movement (1/4 sec). I hope  
you can make sense of them. I don't see  
you need not bother to show them.  
Respectfully, [redacted] et al.

DATE OF REPORT 17 November 1966

SUBJECT UNIDENTIFIED FLYING OBJECT

LOCATION University of Wisconsin, Madison, Wisconsin

DATE 3 April 1966

## PHOTOGRAPHY

AF \_\_\_\_\_ IR \_\_\_\_\_ QUALITY \_\_\_\_\_ Poor

P NRS \_\_\_\_\_ Attached

1. Photography of a reported "unidentified flying object" was analyzed and found to consist of a tiny reddish image of unknown origin. The photography (two 35 mm color slides) was measured and the curved, "boomerang" shaped images were found to be 0.409 mm and 0.222 mm high from end to end with a length from the ends to the curved portion of 0.260 mm and 0.178 mm respectively.
2. A possible explanation is that subject image was stationary with camera movement causing the curved shape of the resultant imagery; the image being that of an electric light used in a fruitless attempt at some night photography of insufficiently illuminated subjects.
